

**Developer and manufacturer  
of steering lock cylinders and lock sets  
to the Motor Cycle  
and Automobile Industry**

**Worldwide supplier of Motor cycle lock cylinders and lock sets of all types**

# Neiman GmbH – GKS GmbH

## History

The Neiman Company was founded in the early twenties by Mr. Abram Neiman under the name Ingenia in Wuppertal, Germany. In the first stage, locks for Motor Cycles were developed and produced.

1932 the first motor car ignition lock was patented and manufactured for Daimler Benz.

1980 Neiman GmbH moved their production plant from Wuppertal to Haan near Düsseldorf, at that time employing approx. 500 people.

1988 the Neiman GmbH was taken over by the French automotive component supplier Valeo S.A. The Motor Cycle division with its numerous smaller customers and wide range of different lock models, did not fit into philosophy of this large series producing automobile supplier Valeo S.A. For this reason the Two Wheel Lock Division was sold to two former employees of the Neiman GmbH.

On the 1.1.1990, Mr. M. Geromel – Technical and Production – and H.J. Konrad – sales and Commercial Manager – took over the Motor Cycle Section under the name:

GKS Schließsysteme GmbH/Neiman Motorrad Schloßtechnik.

GKS employs at the moment 50 people in construction, production and administration. Many staff members were taken over from the Neiman GmbH and some of them have more than 20 years of experience in this particular field.

Due to the fact that GKS has so far exclusively concentrated on the motor cycle sector, the most important aim was already achieved, which is that production and supply to all customers have been substantially improved. Apart from this, 2 completely new developments in the Motor Cycle Lock field have been successfully developed and launched in the meantime.

# Development – Construction – Production – Quality control

Expected by the Motor Cycle owner

Reliable lock function

problem free working condition

handling comfort

Demanded by the Motor Cycle Industry

high quality standard

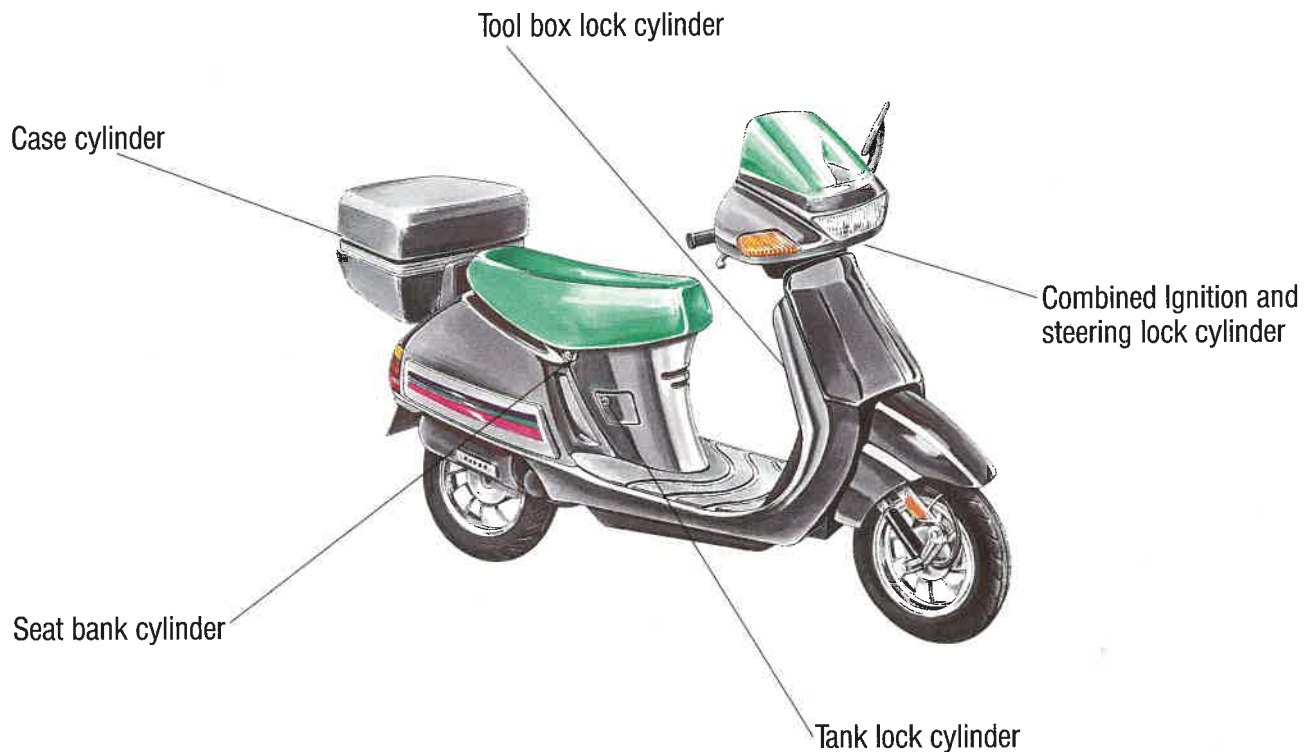

just in time delivery

GKS complies to these demands by applying and using modern methods, machines and devices for the development, manufacturing and quality control of their products.

## Tradition obliges ...

## ... "One key" only Motor Cycle lock cylinder systems
